Summary Background

APPENDIX G

Retail Marketplace Profile for 10-County Region

The retail marketplace profile shows the degree to which the region is importing and exporting certain goods and services. The numbers in GREEN indicate that residents in the community must leave the area (10-county region) to acquire this good or service. This would be considered an import industry. Numbers in RED are goods and services that draw people from outside of the region to use that good or service (export).

One can see that for the NW Michigan planning region, there is a -\$171 million dollar retail gap for Food Services & Drinking Places. The local demand for Food Services & Drinking Places by residents is only \$388.2 million, but the supply is \$560 million. This indicates that around \$172 million in revenue generated in the region by Food Services & Drinking Places comes from people who live outside of the region. While these reports focus only on retail industries, they can provide some inferences on the local character. Fairly consistent with heavily tourism-based communities, northwest Michigan has a negative retail gap for almost all of their retail goods and services, with a few exceptions. Most of the import goods and services are in retail industries now heavily dominated by online retailers. The full retail marketplace profile can be found below.

Retail MarketPlace Profile

10 Counties Antrim County, MI (26009) et al. Geography: County

Prepared by Esri

Annual mental - Americal	
Summary Demographics	
2020 Population	314,144
2020 Households	130,870
2020 Median Disposable Income	\$47,652
2020 Per Capita Income	\$32.603

Data Note: Supply (mids sains) estimates sales to common by establishments. Sales to businesses are excluded. Demand (potal) potential) estimates the expected amount specific by consumers at retail establishments. Supply and demand estimates are in current defent. The Leahage-Surplus Factor presents a arrandox of retail opportunity. This is a measure of the relationship between supply and demand that ranges from - 100 (lotal leakage) to - 100 (lotal surplus). A positive value represents accesses in the relationship between supply and demand that ranges from - 100 (lotal leakage) to - 100 (lotal surplus). A positive value represents accesses in the relationship of the relationship of the relationship of the trade area. A register value represents as uniform are demand in from outside the trade area. The Retail Gap represents the difference between Retail Patential and Retail Sales. But uses the North American Endury Classification System (NAICS) to classify businesses by their primary type of excensions activity. Retail establishments are classified area 27 investigations groups in the Betail Sales estate, as well as four industry groups within the Food Services & Drinking Establishments subsector. For more information on the Retail HarketPlace data, please dick the link below to view the Methodology Statement.
